## International Online Symposium for the Best Practices in Clinical Embryology

**Dear Colleagues,**

The field of Assisted Reproductive Technology (ART) has grown by leaps and bounds. Still a very nascent and evolving field, the need for active research in the field is understated.

The history of **In Vitro Fertilisation (IVF)** goes back more than half a century. The first birth in a nonhuman mammal resulting from IVF occurred in 1959, and in 1978, the world's first baby conceived by IVF was born.

**Louise Brown**, born 43 years ago on 25<sup>th</sup> July 1978, made history by being the first test tube baby conceived through IVF. This was led by Patrick Steptoe and Robert Edwards, the latter of which received the 2010 Nobel Prize for Physiology or Medicine.

To commemorate this success in the field of ART, International Human Embryology Research Academy (iHERA), in association with BSV (Bharat Serums and Vaccines), announces a two-day scientific fest. We take immense pleasure in inviting you to the 5<sup>th</sup> Virtual “**embART 5.0**”- International Online Symposium for the Best Practices in Clinical Embryology to be held on 09<sup>th</sup> November & 10<sup>th</sup> November, 2024.

The theme of this Symposium is “**From Microscope to Miracle**”. **embART 5.0** will feature world renowned faculties from across the globe on a single platform to spread the knowledge, with wide range of synchronized sessions focusing on infertility and reproductive biology guaranteed to stimulate and motivate the audience.

A 2-day Symposium consisting of Pre-Congress Masterclass, Keynote Lectures, Oral Presentations, Interactive Debates and Panel Discussions on Cutting-Edge Research in the field of Human Reproduction and Fertility. The Pre-Congress Masterclass is specially designed for in-depth knowledge and enables you to choose the deliberations specific to your area of interest and clinical practice.

In totality, **embART 5.0** is an innovative and informative event that talks about latest research and techniques used in the field of Clinical Embryology across the world, informs about the processes in clinical governance and Quality improvement and exposes audiences to Clinical Embryology innovators and experts.

We welcome you and look forward to your participation.

**A platform to educate yourself..... listen, get inspired, learn, practise and flourish.**

**Regards,**

## About iHERA

International Human Embryology Research Academy or iHERA is an online, not for profit platform, which envisions for enhancing the knowledge for anyone who wants to expand their information horizon right from basics to expert level. iHERA being in its growing phase; we aim high yet keep our feet grounded. We believe in growing together and welcome all interested in growing with iHERA.

iHERA aims to provide a platform for researchers to share their work from the field of embryology and increase their audience and reach. By providing this means iHERA believes to fulfil the basic need of every aspiring embryologist and researcher – the need to get recognized.
